Provision for preventing the bending of the ties, under the strain brought upon them, might, it is suggested, be devised as simply as for the axies; and, by having a good, long spring to case the snock when the ancior came to a bearing, in addition to the relief which the strain brought upon them, might, it is would come from the draw springs of the en-tire train without any expense at all, a train might easily be brought to a stop within fitteen or twenty feet from an ordinary passenger speed, if something did not give way. A more practicable invention, perhaps, is that of a car fire extinguisher in case of derailment or collision. It consists of a tank of water above the stove, with a large pipe extending from it to the inside of the stove, just above the fire; a trap in the bottom of the tank is connected by levers with a ries of arms at the bottom of the car, one of these arms extending under each corner of each platform, while another extends down toward the track; in case, theredown toward the track; in case, therefore, of collision, one of the arms under the platform must be struck first, thus moving the lever, opening the trap, and instantly deluging the fire with water-or, in case of derailment, one of the arms hanging down toward the track is struck and operates the toward the track is struck and operates the
